

AI powered Omnichain Liquidity Layer

Built on, and
backed by

AXELAR

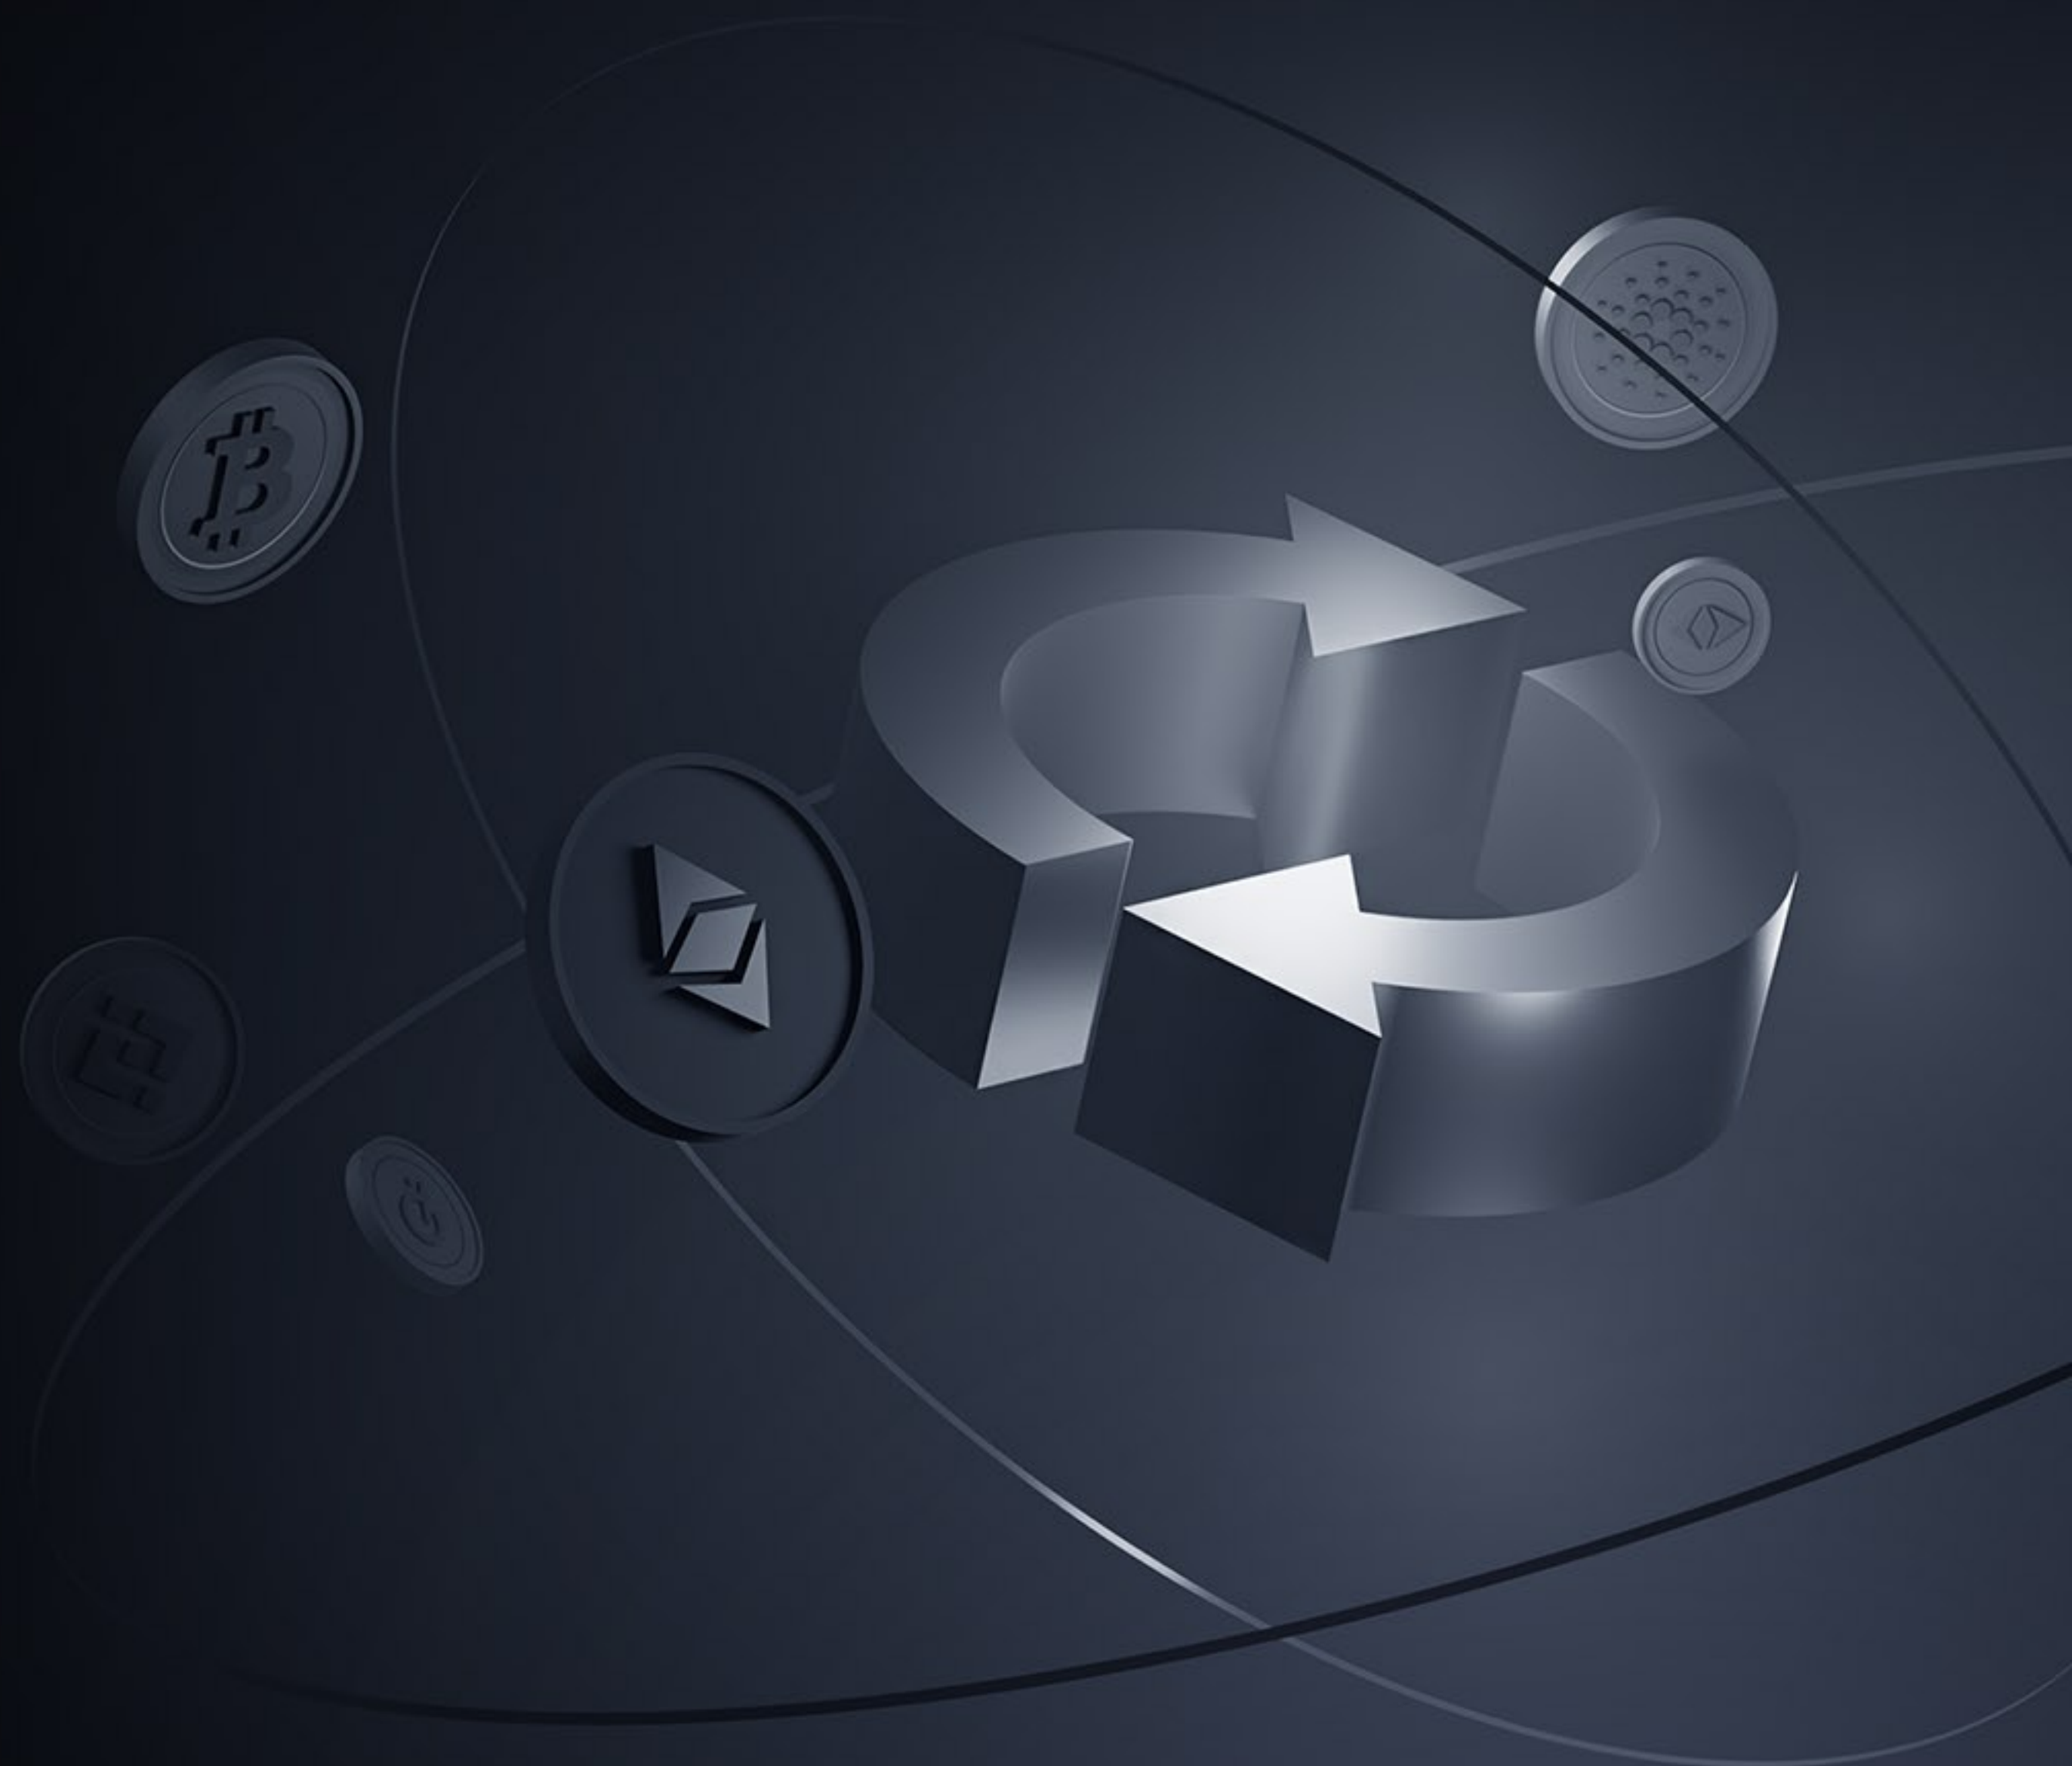

InterSwap: An Introduction

AI first omnichain liquidity unification layer

InterSwap is an AI first, decentralized, capital efficient, and permissionless liquidity unification protocol for users and businesses to seamlessly move & access liquidity across chains & dApps without bridging with near 1-click experience.

Built on, and
backed by

AXELAR

Core differentiation features

AI First

Leveraging AI across Smart Order Routing, Liquidity Management, Trading Assistance, and Options Liquidity Mining (OLM)

Unified Liquidity

New-age liquidity storage to enable bridgeless movement & access of assets/value, directly in its native form with near 1-click experience

Options Liquidity Mining

An innovative and highly rewarding LP token yield strategy that brings "time" as 3rd dimension

Express Swaps

Axelar powered Intents for swift order fulfilment (called Express Swaps) in seconds.
Efficient and quick!

Highly Scalable

Enabling protocols across categories to integrate and expand their offerings thereby fuelling user adoption, growth, and retention

Problems that InterSwap aims to address

Imbalanced Liquidity Distribution

There are 500+ chains but 75% of the liquidity is concentrated across top 3-5 chains only

Rest of chains & dApps are struggling to source liquidity and attract users

Fragmented Supply & Poor UX

Users are flooded with 2000+ options (Bridge, DEX, Aggregators, CEX, Cross-Chain Solutions)

Users end up compromising on Risks, Capital inefficiencies, and Poor UX

Existing capabilities: Cross-chain Liquidity Access

Put your LP token for additional yield in OLM Farms

The Yield comes in the form of ability to buyout reward token at pre-decided discount

The longer the holding period, the more the discounted value

Additional value-add comes in the form of Gasless swaps

- Gamified representation of a user's overall performance across all categories
- It tracks InterPoints (IPs) across all launch viz. Genesis, Unfold, Union, etc.
- Additionally, it shows a users overall IP, and Rank

Existing capabilities: Add-ons

Additional capabilities includes likes tracking transaction history, playing around with them, enable/disable sound, and Launch Onboarding

Value Creation Model

iSWAP, the native token of InterSwap will play a pivotal role in long-term sustained value creation

Scalability horizon

Cross-chain dApps

- dApp that intends to provide multi-chain token support can integrate InterSwap
- The existing single-chain AMMs can expand to cross-chain AMM
- Yield optimizers can leverage InterSwap for cross-chain yield optimization

Lending protocols

- Higher capital efficiency for collateral liquidation on chains with deeper liquidity
- Increase the no. of markets available for their users across chains
- Enable conversion of assets across multiple chains and supplying on the destination chain without leaving UI

NFT and Gaming

- NFT marketplace can integrate InterSwap and allow their users to trade NFTs across multiple chains with any asset
- Gaming Interchain Tokens can be swapped seamlessly with 1:1 pools

Wallet integrations

- The non-custodial wallets can simply integrate InterSwap as a white label solution
- The users then would be able to swap cross-chain without leaving the wallet UI

Roadmap

Strengthening AI Capabilities

Smart Order Routing, Liquidity
Management, Trading Assistance,
and Options Liquidity Mining (OLM)

Enterprise Integrations

Across range of use cases viz. Wallets,
NFT, Gaming, Yield, Lending & Borrowing,
Single/Multi Chain dApps, and more

Ecosystem & Chain Expansions

EVM(L1/L2), altEVM (Cosmos, Solana, Sui etc)

Product Improvement

Feature additions, analytics,
user-centric customizations

THANK YOU
